Additional Backup Information

On December 12, 2013, Council directed the City Manager to create and implement a comprehensive Complete Streets Policy. The draft policy to be provided to Council in response to Resolution No. 20131212-080, is based on national best practices as well as City of Austin staff expertise, community input, and comments and consultations across City departments.

In developing the draft policy, the Austin Transportation Department has led a cross-departmental initiative and input process. ATD has worked in collaboration with Public Works, Planning and Development Review, Capital Planning Office, and other city departments, as well as the Compact & Connected Priority Program Team and Green Infrastructure Priority Program Team. The initiative has included a workshop for Department Directors across the City about the Complete Streets Policy.

Complete Streets is a tool to advance multiple long-term community goals defined by the vision and policies of the Imagine Austin Comprehensive Plan. The intent of this Complete Streets policy is to enhance Austin's quality of life by advancing mobility, public health and safety, livability, sustainability, equity, affordability, economic activity, climate resilience, green infrastructure, excellence in urban design and

community character.

Specifically, this Complete Streets Policy is a tool to implement a core Imagine Austin Priority Program: “Invest in a compact and connected Austin.” As part of this program, the City of Austin commits to making improvements within the right of way that support making pedestrian, bicycle, and transit travel as safe and convenient as vehicle travel. Complete Streets support compact development patterns and expand everyone’s mobility choices for safe and convenient travel by different modes between destinations throughout Austin. They are designed to balance safety and convenience for everyone using the road.

To improve community health, Austin seeks to transform its street network from a barrier to an asset for more active lifestyles. Complete Streets encourage active transportation choices associated with improved health outcomes for people at all stages of life. Safety, including reducing injuries and deaths for pedestrians and bicyclists on Austin roadways, is a fundamental goal of this Complete Streets policy. The City recognizes the multiple public health benefits of reducing the air and climate pollution caused by vehicles. “Green Street” principles can also advance other environmental and sustainability objectives.

The City of Austin recognizes that the design of streets and the right of way provides a unique opportunity to thoughtfully integrate and advance multiple objectives for our community while delivering maximum benefits from City investments.
